Personal Statement

I am a recent graduate, graduating with a Bachelor of Computer and Information Science, majoring in Software Development, where I studied at Auckland University of Technology. I graduated in November and am enthused to develop professional knowledge and skills in the industry. I enjoy working with diverse, multidisciplinary teams of people from different backgrounds. I thrive in creative environments where we can plan and brainstorm different approaches to creating applications and software. During my studies I enjoyed using Java and web development and would like to be able to grow skills that I have already learnt, along with keeping up to date with new technology and methodologies.
